# Introduction

---

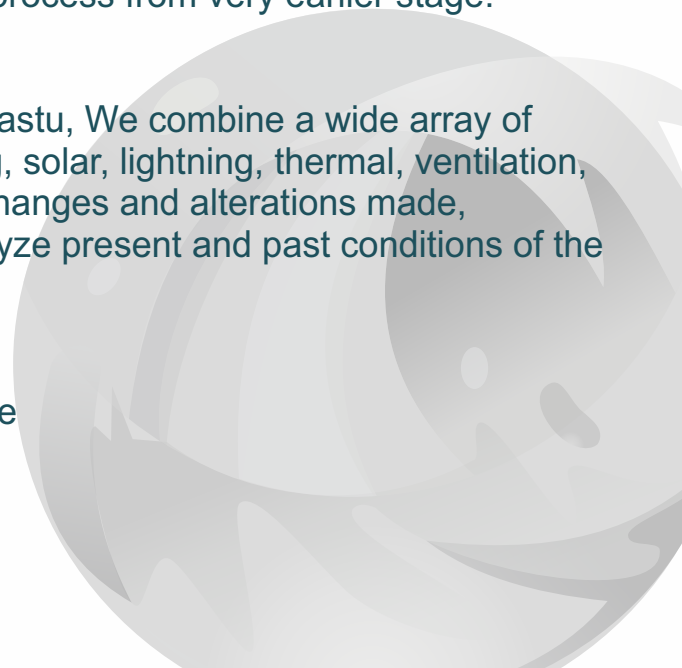

**Vastu Predictions** provides wide range of services to help building owners and user gain a better understanding of environment and Vastu factors that will impact building operations and performance right within the design and Vastu consultancy phase.

To mitigate a building impact on the owner and the user, it is important to first understand how the environment , presence of energy levels, it's positive and negative areas etc, will impact the building owners and users.

We begin our design and Vastu treatment process establishing a basis of design, documenting site conditions, climate, presence of energy levels etc. this holistic approach has helped our Vastu Predictions and Architectural process from very earlier stage.

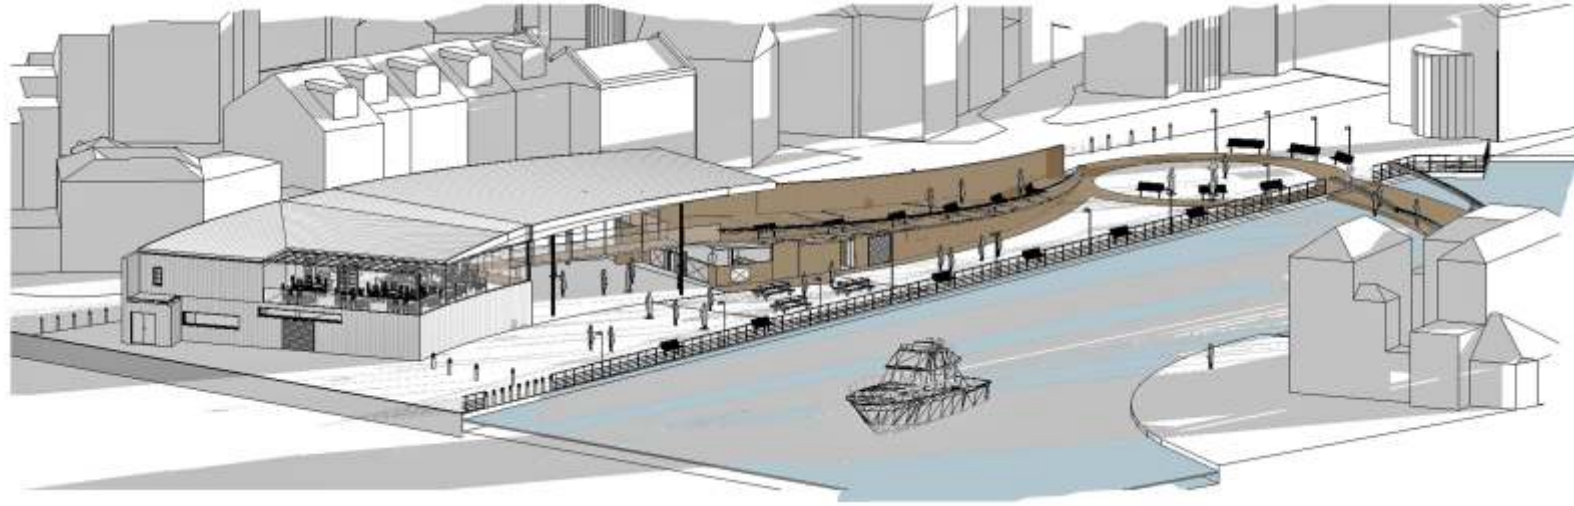

While predicting and treatments of building as per Vastu, We combine a wide array of analysis, investigations, including shadows, shading, solar, lightning, thermal, ventilation, date of starting construction, owners date of birth, changes and alterations made, shape of building etc, that helps us predict and analyze present and past conditions of the owner and user.

This feedback and analysis enables us communicate complex concepts and extensive data sets more effectively and help building owners and users quickly engage with multifaceted performance issues.
